

Prince Rupert Marine Fuel Terminal Construction Under Way

Prince Rupert, British Columbia – (October 14, 2021): Wolverine Terminals ULC (Wolverine) is pleased to announce construction has commenced on its Marine Fuel Terminal in the Port of Prince Rupert.

The Transport Canada approved, rail-served facility and marine operations are scheduled to be operational by Q1 2023 and will be the first-ever marine fuel distribution services at the Port.

“This project further enhances the Port’s already-strong standing in the market as the closest North American port to Asia, utilizing CN’s cross-continent rail network, by providing one more significant advantage in the competitive Pacific gateway trade route,” said Serge Bisson, President.

Local construction activities are scheduled to commence next month and will conclude with the arrival of two custom built vessels prior to operations launch.

The Marine Fuel Terminal will create full-time employment, in addition to new indirect jobs stimulated by potential growth in cargo volumes. The Terminal will also generate supplementary benefits, locally and provincially, through spending on goods and services, taxes, and provide local availability of low-sulphur marine fuel, potentially reducing the number of vessels routing south to refuel.

In 2019, Wolverine completed a comprehensive Environmental Effects Evaluation, complying with the Canadian Environmental Assessment Act (2012), and will continue to be regulated by the Port of Prince Rupert and Transport Canada.

Wolverine will continue to engage all stakeholders and will adhere to all environmental and regulatory requirements for both the construction and operational phases.

“We look forward to a lasting, positive relationship with our partners in Prince Rupert, in addition to our immediate neighbours and surrounding communities,” Bisson said.

About Wolverine Terminals

Wolverine Terminals ULC is a Calgary, Alberta-based company focused on the safe and efficient development of energy-related marine terminals at key ports in Canada and the U.S. Wolverine’s experienced team has the resources and a strong track record of building and operating safe, environmentally responsible, and successful energy service businesses.
